Haven of Bliss - Setup Guide

Static HTML / CSS / JS site. GSAP, ScrollTrigger and Lenis are bundled locally; no build step or server needed.

1. Folder structure

```
haven-of-bliss/
  index.html
  css/style.css
  js/main.js
  js/vendor/  gsap.min.js  ScrollTrigger.min.js  lenis.min.js
  images/     (photos, plans, amenity icons, investor logos)
```

2. Run locally

Open index.html in a browser, or serve the folder with `python3 -m http.server 8000` and visit http://localhost:8000. Fonts (Cormorant Garamond, Manrope) load from Google Fonts, so an internet connection gives the intended typography.

3. Deploy

Upload the whole folder to any static host (Vercel, Netlify, cPanel, S3). index.html must stay at the root.

4. Connect the enquiry form (CONFIG at the top of js/main.js)

`formEndpoint`	URL that accepts a JSON POST (name, email, mobile, message, property_type, formtype, project). If empty, the form opens an email to salesEmail.
`salesEmail`	sales@vbhc.com
`brochureUrl`	Link to the brochure PDF; opens after the brochure form is submitted.
`propertyPrice`	5000000 (Rs 50 lakh), drives the EMI calculator.

5. Analytics

The original Google Analytics snippet (G-23DTDLMZN1) is kept commented out in the head of index.html. Uncomment it on the live domain.

6. Editing notes

Colours and spacing are CSS variables at the top of css/style.css. Animated elements use data attributes: data-split (word reveal), data-reveal (fade-up), data-stagger (children in sequence), data-clip (image mask), data-parallax, data-count (counters). Visitors with reduced-motion enabled get the static page without animation.
